Setting up a Zoho Creator Account and Exploring the Platform Architecture and Interface

AIM:

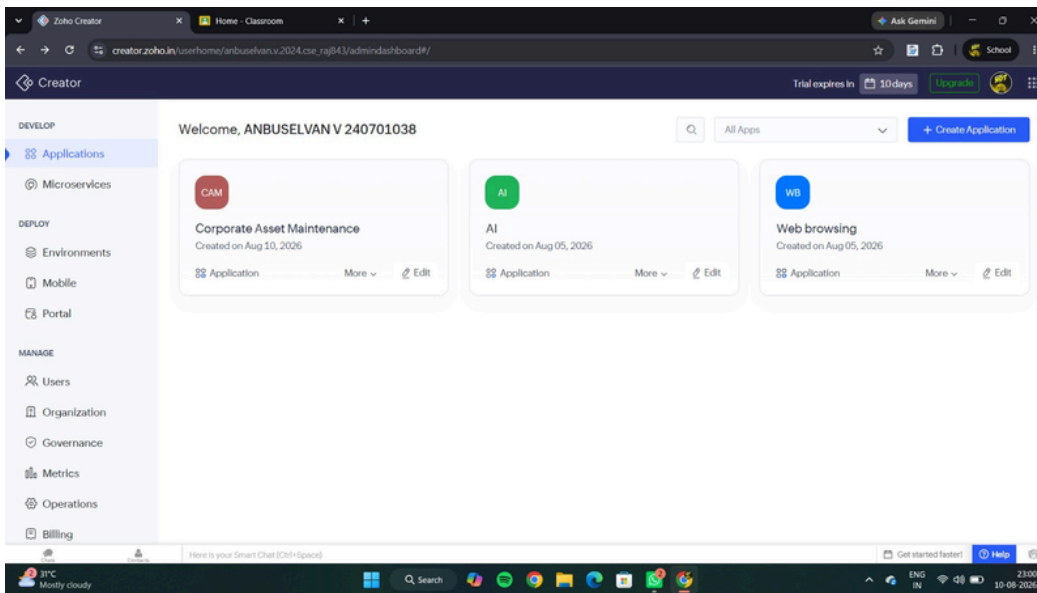

To set up a Zoho Creator account, create a sample application, explore the creation of forms, reports and dashboards, and understand the Develop, Deploy and Manage sections of the Zoho Creator platform.

SETTING UP ZOHO CREATOR:

Step 1: Creating a Zoho Creator Account

1. Open a web browser and visit the Zoho Creator website.
2. Click on Sign Up or Get Started.
3. Create a Zoho account using a valid email address.
4. Log in to the Zoho Creator platform.
5. After successful login, the Zoho Creator home page is displayed. 6.

From the home page, a new application can be created.

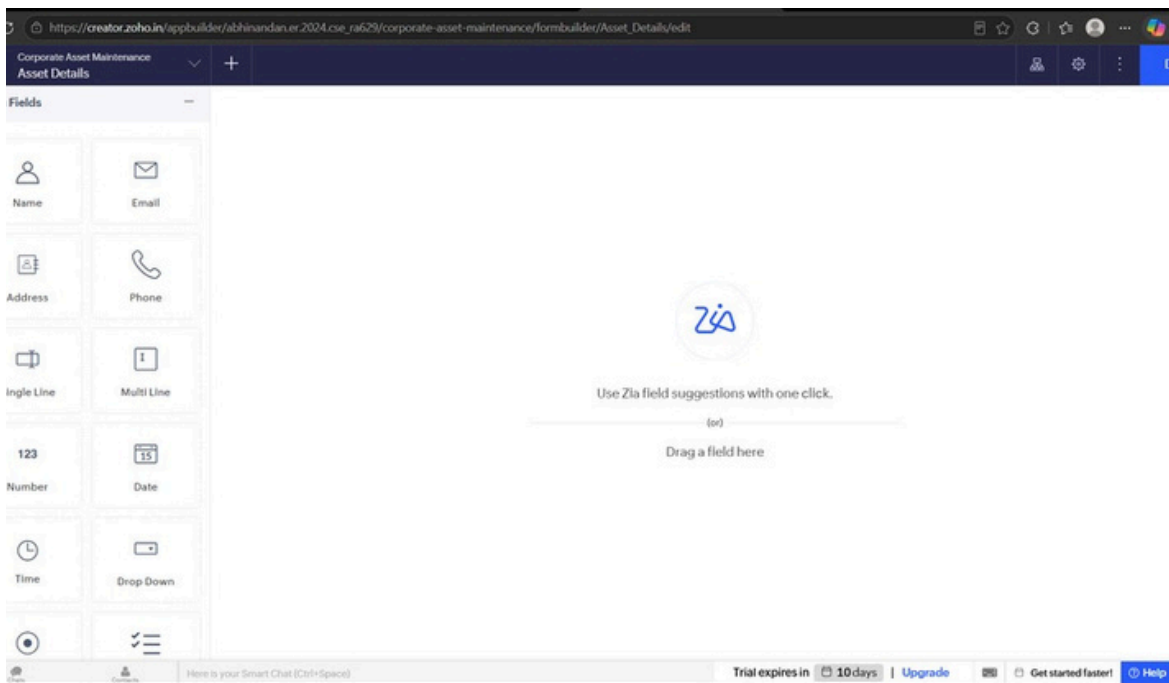

Step 2: Creating a Sample Application

1. Log in to Zoho Creator.
2. Select Create Application.
3. Choose the option to create an application from scratch.
4. Enter the application name as Corporate Asset Maintenance.
5. Click Create.
6. The application builder opens, where different components such as forms, reports and pages can be created.

EXPLANATION:

The Corporate Asset Maintenance application is designed to maintain and manage information about assets owned or used by an organization. It can be used to record asset details, monitor their maintenance status, track maintenance activities and provide summarized information through reports and dashboards.

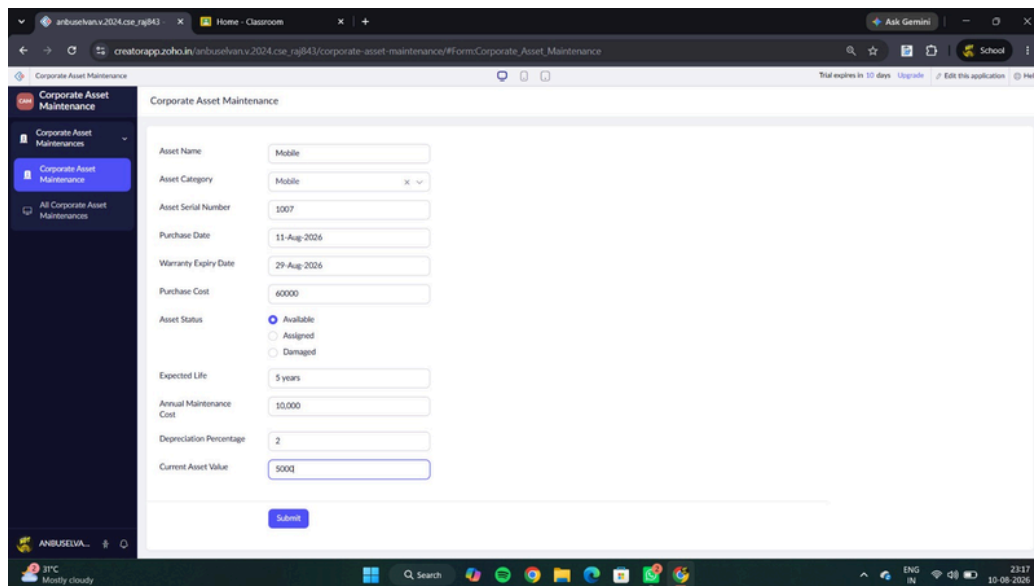

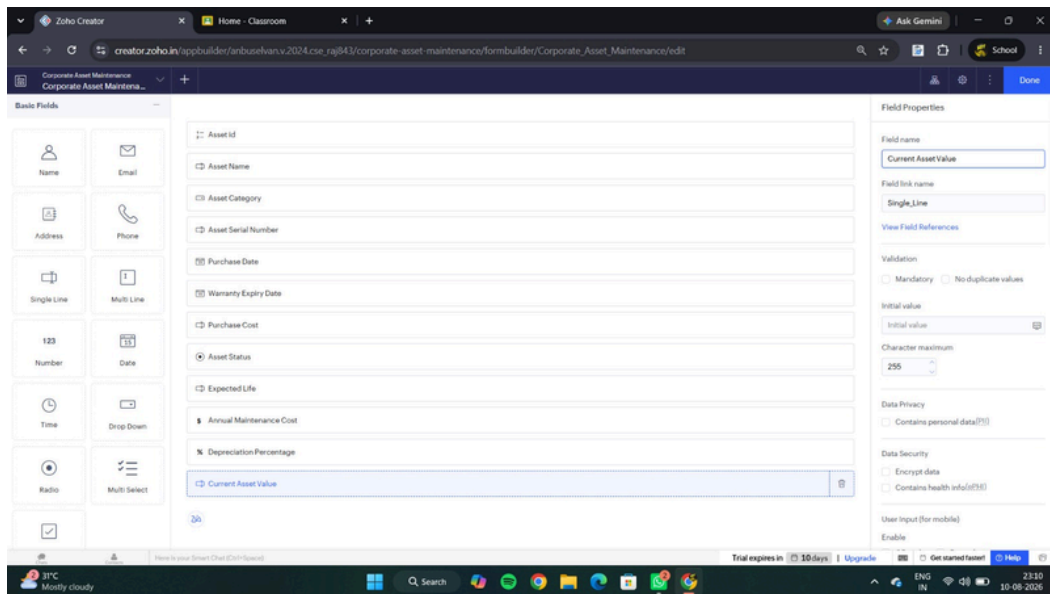

Step 3: Creating the Asset Details Form

1. Open the Corporate Asset Maintenance application.
2. Go to the Develop/Build section.
3. Select Form.
4. Create a new form.
5. Name the form Asset Details.
6. Add the following fields.
7. Save the form.

EXPLANATION:

A **form** is used to collect and store asset information in the application. The Asset Details form records important information such as Asset ID, asset category, department, location, purchase date, status and warranty details. This information helps the organization maintain an accurate record of its assets.

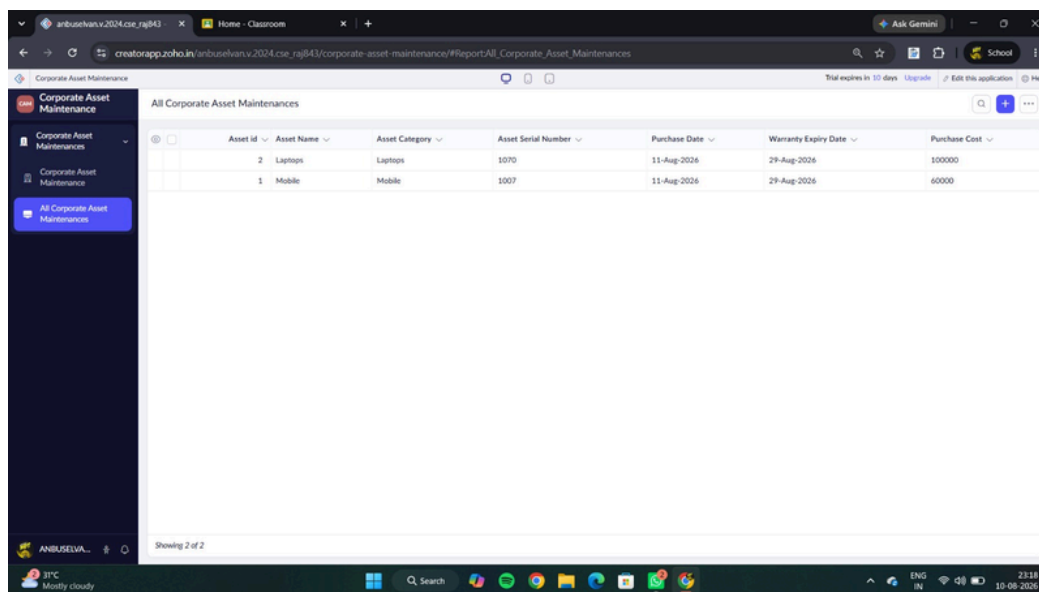

Step 4: Creating the Asset Details Report

1. Open the Corporate Asset Maintenance application.
2. Go to the Develop/Build section.
3. Select Report.
4. Create a new report using the Asset Details form as the data source.
5. Select a suitable report format such as a table/list report.
6. Name the report **Asset Details Report**.

7. Save the report.
8. Add a few sample asset records using the Asset Details form.
9. Open the report to view the stored asset records.

EXPLANATION:

A **report** is used to display and organize the asset records stored in the application. The Asset Details Report provides a structured view of corporate assets and allows users to search, filter and review asset information. It can also help identify assets that are under maintenance or require attention.

The screenshot displays a web application interface for 'Corporate Asset Maintenance'. The main content area shows a table titled 'All Corporate Asset Maintenances' with the following data:

Asset Id	Asset Name	Asset Category	Asset Serial Number	Purchase Date	Warranty Expiry Date	Purchase Cost
2	Laptops	Laptops	1070	11-Aug-2026	29-Aug-2026	100000
1	Mobile	Mobile	1007	11-Aug-2026	29-Aug-2026	60000

The interface includes a sidebar with navigation options and a bottom status bar showing system information like temperature and time.

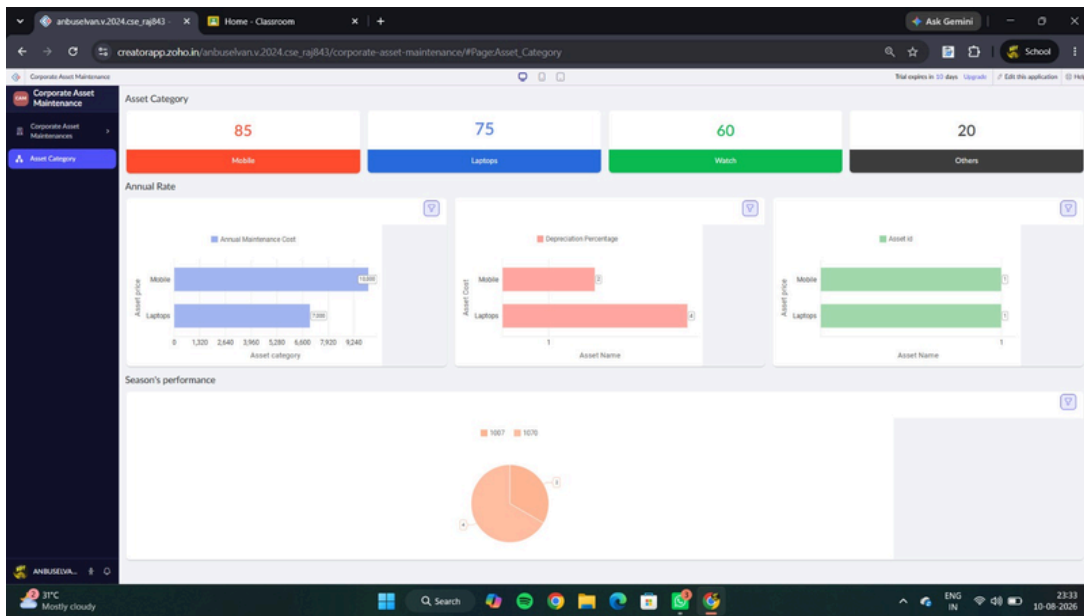

Step 5: Creating the Asset Maintenance Dashboard

1. Open the Corporate Asset Maintenance application.
2. Go to the Develop/Build section.
3. Create a new page or dashboard.
4. Name it Asset Maintenance Dashboard.
5. Add suitable components such as reports, charts and summary information.
6. Create a chart using the Asset Details data.
7. A Department-wise Asset Count can be displayed using a bar chart.

8. An Asset Status chart can be created to show Active, Under Maintenance, Damaged and Retired assets.
9. Arrange the components properly on the dashboard.
10. Save the dashboard.

EXPLANATION:

A dashboard provides a visual and summarized representation of asset-related information. The Asset Maintenance Dashboard can display the total number of assets, assets under maintenance, damaged assets and department-wise asset distribution. It helps management monitor assets and make maintenance-related decisions efficiently.

EXPLORING THE PLATFORM ARCHITECTURE AND INTERFACE: A) DEVELOP

1. The Develop section is used to create and customize the Corporate Asset Maintenance application.
2. It allows users to create forms, reports, pages, workflows and other application components.

3. It provides visual development tools and scripting features for implementing asset management functionality.

B) DEPLOY

1. The Deploy section is used to make the Corporate Asset Maintenance application available to authorized users.

2. It allows the application to be tested, published and accessed based on the required permissions.

3. Deployment enables employees and administrators to use the asset maintenance application in an organization.

C) MANAGE

1. The Manage section is used to administer and maintain the Corporate Asset and Maintenance application.

2. It provides options for managing users, permissions, application settings and administrative functions.

3. It helps administrators monitor the application and control access to corporate asset information.

RESULT:

Thus, a **Zoho Creator account** was successfully created and a **Corporate Asset Maintenance** sample application was developed. The Asset Details form, Asset Details report and Asset Maintenance dashboard were created successfully. The **Develop, Deploy and Manage** sections of the Zoho Creator platform were also explored.
